

Appendix F

Technician Calibration/Repair Bench Equipment

MJWTS has 3 technician bench stations at our Olean facility. The attached Table 1 shows a spreadsheet which lists all this equipment that is for sale and the asking prices which are similar to used equipment available from various vendors. Four stations can be supplied with this equipment. Two scalers, one pulser, one multimeter, 2 oscilloscopes, 2 bench power supplies, one 44-9 probe holder and one high voltage divider box will be needed to complete all four stations. Figures 1 through 7 show pictures of some of this equipment. Figures 8 and 9 show the station furniture. Figure 10 shows the tool drawers for one of the stations. Additional tools also shown after Figure 10.

Technician Test Station Pictures

The following pictures are taken from the Global Industrial web site. It is the type of furniture MJWTS has for sale with the exception that our workbenches are a darker gray as shown in Figure 1 above.

Technician Test Station Tools

The number of tools amassed by MJWTS over the past 15 years are too numerous to list. They are almost too numerous to even photograph. The following pictures detail the contents of just one station. There are three that we have for sale. Estimated worth of these tools is \$10,000. Asking price is \$1,995. The figures below will be captioned as a group.
