Sealed Air SpeedyPacker Insight (2005) Foam-in bag Packaging System (s/n: SP5-1368)

This packing unit has been in service since 2005 (15 years) and remains a workhorse for our packaging operations. Radiation detection instruments don't like to be banged around and this system guards against even the roughest of carrier treatment. As pictured below, the unit was purchased with the optional table in the foreground.
